Test 2

1. Analizirati kod u sljedećim primjerima i utvrditi da li se može kompajlirati i izvršiti. Ako kod nije moguće kompajlirati ili izvršiti, označiti „problematične“ linije koda i navesti razloge. Ako se kod može kompajlirati i izvršiti, napisati izlaze. Po potrebi detaljno obrazložiti. **(7 x 5 bod)**

a)

```
// A1.java
```

```
public class A1 {
    A1 a1;
    static {
        System.out.println("A1-S");
    }
    {
        System.out.println("A1-N");
    }

    public A1() {
        System.out.println("A1()");
    }
    public A1(A1 a1) {
        this.a1 = a1;
        System.out.println("A1(A1)");
    }
    protected void metoda1() {
        System.out.println("A1.metoda1()");
    }
    public void metoda2() {
        System.out.println("A1.metoda2()");
    }
}

class A2 extends A1 {
    static {
        System.out.println("A2-S");
    }
    private A1 a1;
    {
        a1 = new A1();
        System.out.println("A2-N");
    }
    protected A2() {
        super();
        System.out.println("A2()");
    }
    public A2(A1 a1) {
        super(a1);
        System.out.println("A2(A1)");
    }
}
```

```

        System.out.println("G3 readObject");
        a = in.read();
        b = in.read();
    }
}
```

2. Prikazati stanje memorije u trenutku izvršavanja linije sa oznakom 1. Pretpostaviti da je rezervisana dovoljna veličina heap-a i da se garbage collector odmah izvršava nakon poziva metode gc(). (8 bod)

```
// Memory.java
```

```
public class Memory {
    int id;
    double[] doubles = new double[10000000];
    long[] longs = new long[6000000];
    Memory[] mys = new Memory[3];
    Memory m;
    Dumb d;

    public Memory(Memory m) {
        this.m = m;
        if (m != null)
            id = m.id + 1;
    }

    public static void main(String[] args) {
        Memory m0 = new Memory(null);
        Memory m1 = new Memory(m0);
        Memory m2 = new Memory(m1);
        Memory m3 = new Memory(m2);
        Memory m4 = m3;
        Memory m5 = new Memory(m0);
        Memory[] ms = new Memory[3];
        ms[0] = new Memory(m2);
        ms[1] = new Memory(m3);
        ms[2] = new Memory(m2);
        m1 = m2 = m3 = m5 = null;
        System.gc();
        ms[0] = new Memory(ms[0]);
        ms[1] = new Memory(ms[1]);
        ms[2] = new Memory(ms[2]);
        ms[2].m = ms[0];
        m3 = new Memory(ms[0] = null);
        ms[0] = new Memory(ms[0]);
        System.gc(); // 1
    }
}

class Dumb {
    float[] floats = new float[20000000];
    int[] ints = new int[40000000];
}
```

3. Analizirati kod u sljedećim primjerima i utvrditi da li se može kompajlirati i izvršiti. Ako kod nije moguće kompajlirati ili izvršiti, navesti razloge. Ako se kod može kompajlirati i izvršiti, napisati izlaze. Zadaci se boduju po principu "sve ili ništa". (7 x 1 bod)

a)

```
public class Klasa1 {
    public static void main(String []args) {
        int i = 0;
        int j = 10;
        int k = 0;
        while (i++ < 5 || --j > 3) {
            k += i + j;
        }
        System.out.println(k);
    }
}
```

b)

```
;public class Klasa2 {;
    public static void main(String[] args) {
        for (int i = 0; i < 3; i++)
            new Thread(() -> System.out.println("Thread" + i)).start();
    };
}
```

u lamda izrazima varijable MORAJU biti final ili efektivno final

c)

```
public class Klasa3 {
    public static void main(String x[]) {
        Object obj = new String("Word");
        String str = "Word";
        StringBuilder sb = new StringBuilder("Word");

        System.out.println(obj.equals(str));
        System.out.println(obj == "Word");
        System.out.println(str == "Word");
        System.out.println(str == sb.toString());
    }
}
```

1. pošto obj referencira String pozva e se String.equals() pa je ispis true

2. obj je eksplicitno kreiran i pokazuje na blok memorije u heap-u, dok je "Word" string literal koji se nalazi u string pool-u pa je ispis false

3. str je string literal kao i "Word", oba pokazuju na istu memoriju u string pool-u

4. sb.toString() kreira novi String na heap-u sa tom vrijednoš u, dok str pokazuje na literal "Word" u string pool-u, pa e ispis biti false

d)

```
import java.util.stream.*;

public class Klasa4 {
    public static void main(String[] args) {
        Stream.iterate(1, e -> e + 1)
            .filter(Klasa4::isPrime)
            .limit(5)
            .forEach(System.out::println);
    }
    public static boolean isPrime(int number) {
        return number > 1 &&
            IntStream.range(2, number)
                .noneMatch(i -> number % i == 0);
    }
}
```

e)

```
public class Klasa5 {  
  
    public static main(String[] args) {  
        for (String s : args)  
            System.out.println(s);  
    }  
  
    public static main(String arg) {  
        System.out.println(arg);  
    }  
}
```

f)

```
